

PARIS HINDU SUMMIT 2026

Stripe Owner Action and Testing Guide

What the organization owner must complete to enable live payments,
plus the safe test process available today.

CURRENT STATUS	OWNER ACTION
Stripe integration configured	Business verification still required
Test mode ready	Live charges and payouts remain paused

Prepared for the owner and operations team of Non Profit Organization

OWNER ACTION REQUIRED

Two verification tasks are blocking live payments

Stripe currently reports both **charges disabled** and **payouts disabled**. The website integration is connected, but Stripe will not permit successful live collection until the account owner completes the overdue verification tasks.

Who must do this

An account **Owner or Administrator** should complete these steps. The invited Developer role can configure the integration but cannot submit owner-restricted verification information.

1

Open Stripe Account Status

Sign in to the **Non Profit Organization** Stripe account. Open the alert for required tasks, or go to dashboard.stripe.com/.../account/status.

2

Complete: Verify your business directors

Open the task and provide the requested director or governing-person information exactly as it appears in official records. Stripe may request names, roles, dates of birth, addresses, ownership or control details, and identity evidence. Follow the fields Stripe shows for this account.

3

Complete: Provide a business verification document

Upload one of the document types Stripe accepts on the task screen. The document should be current, complete, readable, and show the same legal organization name and address entered in Stripe. Typical accepted records may include an incorporation or registration document, charity/non-profit registration evidence, or an official registry extract. Use Stripe's displayed accepted-document list as the authority.

4

Submit and monitor the review

After submission, return to Account Status until both tasks show completed. Watch the owner's email and Stripe notifications for any follow-up request. If Stripe rejects a document, correct the mismatch or upload a clearer accepted document.

5

Confirm activation before announcing donations

Do not announce live card donations until Stripe shows payments enabled. The final technical check is: **charges enabled = true** and **payouts enabled = true**.

Urgent security action

The live secret key was shared in a chat message. It should be **rolled/replaced** in Stripe, and the replacement must be stored in the production Convex variable **STRIPE_SECRET_KEY** without posting it in email or chat. Coordinate this with the developer so the website is updated immediately after rotation.

SAFE TESTING

What can be tested right now

Use Test mode only

Test mode never moves real money. Do not use a real card while the live account is paused. The development Stripe webhook and development Convex secrets are already configured.

A. Start the development website

```
cd summit-website
bun run dev
```

Open <http://localhost:3000/donate>. If the page says donations are disabled, enable donations in the development admin site's Global Site Settings before continuing.

B. Complete a Stripe test checkout

Field	Safe test value	Meaning
Amount	EUR 5 or a listed tier	The code requires at least EUR 5
Card number	4242 4242 4242 4242	Stripe's standard successful test card
Expiry	Any future date	Example: 12/34
CVC	Any 3 digits	Example: 123
Postal code	Any valid-looking value	Example: 75001

C. Verify the result

- OK** The browser returns to /donate?status=success after Stripe Checkout.
- OK** The donation appears in the development admin donation records as paid.
- OK** In Stripe Test mode, the payment appears under Transactions/Payments.
- OK** Workbench > Event destinations > Paris Hindu Summit - Development shows a successful delivery with HTTP 200.
- OK** Convex development logs show no Stripe webhook signature error.

READINESS SUMMARY

What is configured, and what remains

Item	Status	Detail
Development API key	Configured	Stored in development Convex
Development webhook	Active	befitting-oyster-615.convex.site/stripe/webhook
Production API key	Configured	Stored in production Convex; rotation recommended
Production webhook	Active	amiable-dogfish-765.convex.site/stripe/webhook
Webhook events	Configured	checkout.session.completed and checkout.session.expired
Production site URL	Configured	https://www.parishindusummit.org
Live payments	BLOCKED	Stripe business verification incomplete
Live payouts	BLOCKED	Stripe business verification incomplete

Go-live sequence after Stripe approval

1

Rotate the exposed live secret key

Roll the key in Stripe and replace STRIPE_SECRET_KEY in production Convex without sharing the value in chat.

2

Confirm capabilities

Verify Stripe displays payments and payouts as enabled. If either remains paused, open Account Status and resolve the remaining task.

3

Run one controlled live payment

Use the smallest supported amount, EUR 5, with an authorized real card. This is a real transaction. Confirm the website redirect, Stripe payment, webhook HTTP 200, and paid donation record.

4

Refund the controlled payment if appropriate

Use Stripe Dashboard > Payments > select payment > Refund. Record that processor fees may not be returned, depending on Stripe's applicable terms.

5

Open public donations

Only after the controlled payment succeeds should the organization promote the card-donation pathway publicly.

If a test fails

Capture the exact message and check, in order: Stripe Test mode versus Live mode, whether donations are enabled, the selected donation tier, Stripe Workbench delivery status, and Convex logs. Do not paste API keys or webhook signing secrets into tickets, email, or chat.
